Individual Wellness Plan (IWP) – Customized to Your Horse’s Health Needs and Easy on Your Budget With Interest-Free Monthly Payments.

Our IWP Provides a Full Year of Wellness Care That Your Horse Needs To Be Healthy and Active:

Vaccinations: Many diseases that the average horse is at risk for can be prevented with appropriate vaccinations. Vaccinations for rabies, tetanus, and mosquito borne diseases are recommended for all horses. Additional risk-based vaccines such as influenza and strangles can be added based upon your horse’s individual needs.

Dental Care: Routine dental care includes oral examination and dental equilibration. This care is critical to ensure that dental problems do not interfere with your horse’s performance, and to detect and treat dental abnormalities that can lead to nutritional deficiencies, colic, and discomfort.

Examinations: Regular, detailed physical examinations can help pick up abnormalities before they become more serious. Cardiac, respiratory, musculoskeletal, and nervous system problems can all be discovered with a thorough physical exam.

Parasite Prevention: Quarterly fecal egg counts to monitor parasite burden have replaced rotational deworming as the standard of care. Egg counts guide treatment, minimize the need to give medications, help to keep the gastrointestinal tract healthy, and prevent the development of resistance to dewormers.

Blood Work: Much like detailed physical examinations, routine lab work can help reveal issues such as organ and immune system dysfunction, endocrine disease, and anemia prior to them becoming life-threatening problems.

Individualized Care: In addition to all the services included in the IWP, other services can be added to best ensure your horse’s plan is truly customized to their individualized needs. Based on a conversation with our veterinarians at the time of enrollment, add on service such as additional dental equilibrations, endocrine testing, radiographs and lameness evaluations, among many others, can be included.
